Exporting Projects

Important! The uninstallation may delete existing Composer projects if your Project Workspace resides in the installation directory. If this is the case, copy any existing Project folders to a safe location by following the procedure below.

Before Uninstalling, export Projects to a safe location.

1. In the Composer Project Explorer view, right click the Project folder and select **Export...**
2. In the Export dialog box, expand **General > File System**.
3. Click the **Next** button.
4. Check boxes for the Projects to export and choose/browse to the export destination folder.
5. Click the **Finish** button.

Uninstall Procedure

Use the procedure below to uninstall the Composer plugins and reinstall a newer version.

To uninstall both the Eclipse plugin and the Composer installation:

1. Run *eclipse.exe* or click the Eclipse desktop shortcut.
2. From the Eclipse Help menu, select **About Eclipse SDK**.
3. Click the **Installation Details** tab.
4. Under **Installed Software**, select the Composer entries and click **Uninstall**. If the Uninstall button does not activate, exit Eclipse, right-click the Eclipse desktop icon, and select **Run as administrator**. This is a known feature on Windows 7.
5. Go to **Control Panel > Add/Remove Programs**.
6. Select **Genesys Composer** from the list of currently installed programs, and then click **Remove**.

Reinstall Procedure

To reinstall on Windows, repeat the installation steps in [Installing Composer on Windows](#).
