Composer Help

Security Configuration

5/11/2025

Security Configuration

You have the option of configuring:

- A secure Transport Layer Security (TLS) connection between Composer and Universal Contact Server (UCS) during application design when [connecting to Context Services](#).
- A secure TLS connection when [connecting to Configuration Server](#) during design time.

You can also configure:

- A security banner that displays when users establish a Configuration Server connection.
- An inactivity timeout. If a Composer user has authenticated with Configuration Server, Composer times out after a configurable number of minutes of inactivity.
- Both certificate-based and key-based authentication.

For information on configuring the above features, see the [Genesys Security Deployment Guide](#)
