Plugin Installation

When installing plugins into Composer, you may have to add an update site to Composer's installation preferences.

1. Go to **Window** > **Preferences**.

2. Select **Install/Update** > **Available Software Sites**.

3. Ensure that the Galileo Eclipse Version update site is present

4. If the version update site is not present, add it. The URL for the location is:

http://download.eclipse.org/releases/$EclipseVersionName$ where EclipseVersionName is galileo, juno, kepler, and so on).
