# Composer Help

VXML File Preferences

# VXML File Preferences

## Contents

- **1 VXML File Preferences**
  - 1.1 Creating Files
  - 1.2 Validating Files
  - 1.3 Source, Syntax Coloring, and Templates

### Tip

Composer natively supports VXML 2.1.

Select **Window > Preferences > Composer > VXML Files**. The following preferences for VXML files can be set in the Preferences dialog box:

## Creating Files

1. Under **Creating Files**, select the Suffix to use for VXML files from the drop-down list: \*.vxml
2. Select the **Encoding** type from the drop-down list. The encoding attribute in a VXML document specifies the encoding scheme. The encoding scheme is the standard character set of a language. The VXML processor uses this encoding information to know how to work with the data contained in the VXML document. UTF-8 is the standard character set used to create pages written in English. Select from the following:
  - ISO 10646/Unicode(UTF-8)
  - ISO 10646/Unicode(UTF-16) Big Endian
  - ISO 10646/Unicode(UTF-16BE) Big Endian
  - ISO 10646/Unicode(UTF-16LE) Little Endian
  - US ASCII
  - ISO Latin-1
  - Central/East European (Slavic)
  - Southern European
  - Arabic, Logical
  - Arabic
  - Chinese, National Standard
  - Traditional Chinese, Big5
  - Cyrillic, ISO-8859-4
  - Cyrillic, ISO-8859-5
  - Greek
  - Hebrew, Visual
  - Hebrew
  - Japanese, EUC-JP
  - Japanese, ISO 2022
  - Japanese, Shift-JIS

- Japanese, Windows-31J
- Korean, EUC-KR
- Korean, ISO 2022
- Thai, TISI
- Turkish

## Validating Files

- Select or clear the **Warn when no grammar is specified** check box (not selected by default).

## Source, Syntax Coloring, and Templates

Source, Syntax Coloring, and Template preferences for VXML files are set under the XML preferences provided by Eclipse.

- Use **Window > Preferences**, expand the **Web and XML** entry, then expand the **XML Files** subentry.

This preference allows you to add **custom VXML schemas** into Composer to be used in namespaces for new VXML files created through the VXML editor.
