Transaction List Block

Transaction List Block

You can use the **Transaction List** block to assign transaction list values to variables. You can define a variable in the **Initialize** phase and then select it in this block and assign it a value from the transaction list.

Variables are assigned string values when **List**, **Item**, and **Key** are all specified, or key-value pairs if you only specify **List** and **Item** (for example, {Key1:value1, Key2:Value2}).

Example

Properties - Transaction List

This block can assign transaction list values to variables. Define a variable in the Initialize phase and select it in this block to assign it a value from a transaction list. Variables are assigned string values when List, Item and Key are all specified or key/value pairs ({Key1:value1, Key2:Value2, ...}) if only List and Item are specified.
