# Framework Management Layer User's Guide

SNMP Support

# SNMP Support

This section describes Management Layer support for network management systems (NMS) that comply with the Simple Network Management Protocol (SNMP). It also describes how to activate this function. In particular, it focuses on how the Management Layer distributes SNMP commands from an NMS and how it processes alarm reactions of the SNMP Trap type. It also describes the layout of the Genesys Management Information Base (MIB) file and the format of the SNMP traps, including the abbreviations for the Genesys application types.
