Monitoring and Control Functions

This chapter provides additional information and hands-on tips for using the following Management Layer monitoring and control functions, including information about involved applications and reference documents:

- Monitoring solutions, applications, and hosts

- Viewing system performance

- Managing 3rd-party applications

- Avoiding an unnecessary switchover

- Handling stuck calls

- Managing environments with redundant Configuration Servers, also referred to as high availablity (HA) configurations

- Managing environments that include one or more Configuration Server Proxies, also referred to as distributed Configuration Server configurations.

- Using the mlcmd Command-Line utility to assist you in monitoring and controlling your configuration.
