Genesys Administrator Extension Deployment Guide

Configuration Options

Configuration Options

Contents

- [1 Configuration Options](#)
 - [1.1 Setting Configuration Options](#)

This appendix describes the configuration options for Genesys Administrator Extension, and contains the following sections:

- [Mandatory Options](#)
- [general Section](#)
- [asd Section](#)
- [arm Section](#)
- [ga Section](#)
- [log Section](#)
- [opm Section](#)

Important

There are no configuration options required for the Operational Parameters Management module.

Setting Configuration Options

The configuration options specified in this chapter are used by GAX after it has connected to Configuration Server. GAX also reads the `gax.properties` file for configuration options that are set before it connects to Configuration Server. See [Configuring GAX Properties](#) for more information about the `gax.properties` file.

Unless specified otherwise, set Genesys Administrator Extension configuration options in the `Application Options` tab of the Genesys Administrator Extension Application object.

Warning

Configuration section names, configuration option names, and predefined option values are case-sensitive. Type them in Genesys Administrator Extension exactly as they are documented in this appendix.
