# Genesys Administrator Extension Help

[Filters](#)

# Filters

A Dialing Filter restricts **Calling Lists** so that only certain numbers are dialed during a **Campaign**.

## Important

Creating Dialing Filters requires using Enumeration values in place of text values for some mandatory fields. An Enumeration value is a numeric representation of a Genesys mandatory field value. For more information about Enumeration values, see "Genesys Enumeration Tables" in the **Outbound Contact 8.1 Reference Manual**.

## Display Options

## Display Options

The **Filters** list shows the filters that are in your environment. It is sorted in a hierarchy by Tenants, configuration units, sites, and folders. To view objects by a particular hierarchy, select the hierarchy type in the drop-down menu above the list.

## Important

Filters that are disabled will appear grayed out in the list.

Configuration Manager respects tenancy permission settings. You can access only those objects that you have been granted permissions and privileges to access.

You can filter the contents of this list in two ways:

- Type the name or partial name of an object in the **Quick Filter** field.
- Click the magnifying glass button to open the **Tenant Directory** filter panel. In this panel, click the Tenant that you want to select. Use the **Quick Filter** field in this panel to filter the Tenant list.

You can sort the items in the list by clicking a column head. Clicking a column head a second time reverses the sort order. You can add or remove columns by clicking the **Select Columns** button.

To select or de-select multiple objects at once, click the **Select** button.

# Procedures

## Possible Procedures from this Panel

To **create a new Filter object**, click the New button. To view or edit details of an existing object, click on the name of the object, or click the check-box beside an object and click the Edit button.

To delete one or more objects, click the check-box beside the object(s) in the list and click the Delete button. You can also delete individual objects by clicking on the object and then clicking the Delete button.

Otherwise, click the More button to perform the following tasks:

- Clone—Copy a Filter.
- Move To—Move a Filter to another **hierarchical structure**.
- Enable or disable Filters.
- Create a folder, configuration unit, or site. See **Object Hierarchy** for more information.

Click on the name of a Filter to view additional information about the object. You can also set **options** and **permissions**, and view **dependencies**.

## Creating Filter Objects

To create a Filter object, perform the following actions:

1. Go to Configuration > System > Configuration Manager.
2. Click Filters. The Filters list displays.
3. Click the New button.
4. Enter the following information. For some fields, you can either enter the name of a value or click the Browse button to select a value from a list:
  - Name—The name of the Filter.
  - Description—A brief description of the Filter.
  - Format—The format to which this filter is applied. Once it is specified, it cannot be changed. You assign a Filter object to a Calling List object with the same format.
  - Tenant—In a multi-tenant environment, the Tenant to which this object belongs. This value is automatically set to the Tenant that was specified in the Tenant Directory field in the object list.
  - **State Enabled**—If selected, indicates that the object is in regular operating condition and can be used without any restrictions.
5. Click the Save button.
