Deleting Solution Definitions

5/5/2025

Deleting Solution Definitions

When you delete a solution definition file, the solution definition file is not deleted from the database, nor are the IPs deleted from the IP repository.

1. In the `Solution Definition List` screen, select the solution definition file that you want to delete.

2. In the `Properties` area that is displayed to the right of the `Solution Definition List`, click `Delete`.

3. In the Confirm Deletion dialog box, do one of the following:

   - To remove the solution definition file from the database, click `OK`.

   - To keep the solution definition file and not remove it from the database, click `Cancel`.
