# Deploying Solution Definitions

Deploying a solution installs and configures the solution at a local or remote location, as directed by the solution definition.

1. In the Solution Definition List screen, select the solution definition file that you want to deploy.
2. In the Properties area that is displayed to the right of the Solution Definition List, click the Related button and select Install or Deploy Profile.
3. Follow the steps in the Deployment Wizard.

## Important

The Deploy Profile type varies, depending on the profile specified in the solution definition file. For example, profile name="upgrade" would produce a Deploy Profile: upgrade button.
