Genesys Administrator Extension Help

[Access Groups](#)

Access Groups

Access Groups are groups of **Users** who need to have the same set of **permissions** for Configuration Database objects.

In many cases, users fall into a small number of categories with similar access needs. A team of agents all performing the same tasks often has identical access needs. Two or three people responsible for maintaining a specific site of the contact center may also have identical access needs. You can greatly simplify access control by adding individuals to Access Groups and then setting permissions for those groups.

Important

- The default user account is not related to Access Groups and, therefore, does not appear as a member of any Access Group.
- For detailed instructions about managing Roles assigned to Access Groups, refer to the [Genesys 8.1 Security Deployment Guide](#).

Display Options

The **Access Groups** list shows the Access Groups that are in your environment. It is sorted in a hierarchy by Tenants, configuration units, sites, and folders. To view objects by a particular hierarchy, select the hierarchy type in the drop-down menu above the list.

Important

Access Groups that are disabled appears grayed out in the list.

Configuration Manager respects tenancy permission settings. You can access only those objects that you have been granted permissions and privileges to access.

You can filter the contents of this list in two ways:

- Type the name or partial name of an object in the **Quick Filter** field.
- Click the cube icon to open the **Tenant Directory** filter panel. In this panel, click the Tenant that you want to select. Use the **Quick Filter** field in this panel to filter the Tenant list.

To select or de-select multiple objects at once, click **Select**.

Procedures

To **create a new Access Group object**, click **New**. To view or edit details of an existing object, click on the name of the object, or click the check box beside an object and click **Edit**. To delete one or more objects, click the check box beside the object(s) in the list and click **Delete**. You can also delete individual objects by clicking on the object and then clicking **Delete**.

Important

When you delete an Access Group, only the Access Group object itself is removed from the Configuration Database. Its member objects—Access Group and User objects—are not deleted.

Otherwise, select the check box beside one or more objects and click **More** to perform the following tasks:

- **Clone**—Copy an Access Group.
- **Move To**—Move an Access Group to another [hierarchical structure](#).
- Enable or disable Access Groups
- Create a folder, configuration unit, or site. See [Object Hierarchy](#) for more information.

Click on the name of an Access Group to view additional information about the object. You can also set [options](#) and [permissions](#), and view [dependencies](#).

Procedure: Creating Access Group Objects

Steps

1. Click **New**.
2. Enter the following information. For some fields, you can either enter the name of a value or click **Browse** to select a value from a list:
 - **Name**—The name of the Access Group. You must specify a value for this property, and that value must be unique within the Configuration Database (in an enterprise environment) or within the Tenant (in a multi-tenant environment).
 - **Tenant**—In a multi-tenant environment, the Tenant to which this object belongs. This value is automatically set to the Tenant that was specified in the Tenant Directory field in the object list.
 - **State Enabled**—If selected, indicates that the object is in regular operating condition and

can be used without any restrictions.

3. Click **Apply** to save the access group. The **Members** tab appears.
4. In the **Members** tab, click **Add** to add a User. In the pop-up window, you can create a new User object by clicking **+**.
5. Perform one of the following actions after you have added a User to the Access Group:
 - Click **Save** to accept the changes and return to the object list.
 - Click **Apply** to accept the changes and remain in the tab.
 - Click **Cancel** to discard the changes.
