Import

12/14/2025

Import

The **Import** view allows you to import a ZIP file containing various application or module details.

To import files:

1. In the **What to Import** section, select one of the following options:
 - **Import Everything** – Includes all callflows, uploaded grammars, product-specific settings, and uploaded audio files.
 - **Import Prompts Only** – Includes uploaded audio files, such as those that are part of the callflow and those that are product-specific.
 - **Import Product-Specific Data and Prompts Only** – Unlike **Import Everything**, this option excludes callflow information, static prompts, and grammars.
2. In the **ZIP File to Import** section, select the zip file you want to import, and then click **Choose Modules to Import**.
3. The **Choose Modules to Import** window displays the modules that GAAP found in the ZIP file. You can:
 - Click **Ignore** beside a module that you do not want to import.
 - Enable the **Deploy these templates to production after import** check box to deploy these modules directly to your production environment.
4. Click **Import**.

Important

If a module is modified after import and reimported to a different environment, the **Link** blocks to other modules become empty. To avoid this, export all apps and modules even if only one module was modified.

Important

If you import an application or module that uses multiple retry or timeout prompts, but your current environment does not support this feature, the additional prompts are hidden from view but not deleted. These additional prompts appear only if it is supported by your environment.
