# Understanding and using reports

This page helps you understand Genesys Customer Experience Insights (Genesys CX Insights) reports and dashboards. The Genesys CX Insights reports and dashboards for Genesys Info Mart compile historical contact center interaction activity and agent-summarized states for telephony and multimedia DNs.

## Important

In keeping with Genesys' commitment to diversity, equality, and inclusivity, beginning with release 9.0.019.01, some pod names are changed; this document refers to "gcxi-primary" and "gcxi-secondary" pods. In release 9.0.019.00 and earlier, these pods were named "gcxi-master" and "gcxi-slave".

## Reports

Genesys CX Insights includes several dozen reports out-of-the-box, which are available in subfolders within the **CX Insights** folder. The data in the reports represents a snapshot of the database at a given point in time; to view current data, you must run the report to display the latest data. The reports use the hierarchies, metrics, attributes, prompts, details, and filters that are defined in the CX Insights Project.

Reports are designed using MicroStrategy Web. The figure shown here illustrates the organization of some of the reports in the Agents folder and some of the operations that you can perform within MicroStrategy Web. For more information about customizing the reports, see [Customizing reports and dashboards](#)

## Dashboards

Genesys CX Insights includes several dashboards out-of-the-box. While some dashboards are available in the **CX Insights > Dashboards** folder, many are found in other folders, where they are grouped with reports based on the type of content they provide -- see the latest list of [Dashboards](#) for more information.

The Genesys CX Insights dashboards provide visual summaries of information that would otherwise be displayed across several reports. The data in the dashboards represents a snapshot of the database at a given point in time; to view current data, you must run refresh the dashboard to display the latest data. For optimal viewing of the dashboards, set your screen resolution to a the highest resolution that is practical, and in any case, to a width of at least 1280 pixels.

Dashboards are designed using MicroStrategy Web. For more information about customizing the

dashboards, see [Customizing reports and dashboards](#)

## CX Insights interfaces

Your interaction with CX Insights will usually take place in one of two GUIs:

- **MicroStrategy Web** — When you view, run on-demand, or modify a report or dashboard, you do so using MicroStrategy Web, the primary Genesys CX Insights GUI, which you access using the URL (<yourserver>/MicroStrategy/servlet/mstrWeb) provided by your administrator. Administrators can configure permissions that determine which operations each user can perform in MicroStrategy Web. MicroStrategy Web is discussed on this page.

MicroStrategy certifies the latest versions, at the time of release, for the following web browsers:

- Apple Safari
  - Google Chrome (Windows and iOS)
  - Microsoft Edge
  - Microsoft Internet Explorer (Versions 9 and 10 are supported, but are not certified)
  - Mozilla Firefox
- **MicroStrategy Developer** — Reserved for administrator use, MicroStrategy Developer is a standalone application you access on the computer where MicroStrategy software is deployed. Use Developer to create and manage projects, objects and users, and to perform other administrative actions. MicroStrategy Developer is discussed in more detail on the [Understanding the Project](#) page.

The Contact Center Dashboard on a mobile device

## Mobile support

You can also access Genesys CX Insights dashboards from your Apple iPad. Genesys supports accessing the dashboards in this fashion, but does not recommend using reports from a mobile device, as they are not designed for small screens. See the [Genesys CX Insights Deployment Guide](#) for more information, and the [MicroStrategy website](#).

Genesys documentation, including this document, also supports mobile devices. In most cases, it is easier to use Genesys CX Insights, and the documentation, in landscape mode.

## Video: Generate reports in Genesys CX Insights

### [Link to video](#)

This video describes how to generate reports in Genesys CX Insights.

## Accessing and running reports and dashboards

1. Go to the Genesys CX Insights (MicroStrategy Web) link provided by your administrator.
2. If a page appears where you can select a server, choose the server on which to view reports (you probably have only one, but if more than one appears, and you are not sure which one to select, contact your administrator).
3. If prompted, enter your user name and password.
4. The Genesys CX Insights page appears. Click **Shared Reports > CX Insights**.  
In most cases, the reports you need are found in the **Shared Reports** folder:

- **Shared Reports**—Reports and dashboards stored in the **Shared Reports** are available to other users (access privileges permitting).
  - **My Reports**—Reports stored in your private folders, such as **My Reports**, are visible only to you. This folder is visible only to users who have sufficient privileges to edit or save reports.
5. Reports are divided into subfolders based on function; select a sub-folder, for example **Business Results**.
  6. From the listed reports, either double-click a report, or right-click and choose **Run**. For example, **Business Metrics Executive Report**. The prompts for that report appear.
  7. Select a date or date range, and optionally make selections for other prompts. To generate meaningful reports, choose dates for which your environment has data. Note that, if you are working in a **demo/development environment**, data is available for a limited period:
    - For Genesys CX Insights reports, data is available for the period September 2015 to October 2016.
    - For Genesys CX Insights for iWD reports, data is available for the period February 12, 2019 to February 21, 2019.

When you run reports in such environments, choose dates within that range, or simply remove the default value from the first prompt (Pre-set Date/Day) before you run the report.

### **[+] More about prompts**

Many reports offer a long list of prompts, but you don't have to make selections at all those prompts. For most reports, you can simply select a date or date range, and click **Run Report** to generate the report. Before you do, note that the default **Start Date** and **End Date** encompass the entire current year; depending on your environment, this may not be a suitable range. For more information about prompts, see [How do I control what data appears in a report?](#)

8. Click **Run Report**.  
The report appears. You can filter, drill, and otherwise interact with many report values.

As you browse in Genesys CX Insights, clickable breadcrumbs are displayed at the top and bottom of the page:

Shared Reports > CX Insights > Business Results

Click any word in the breadcrumb to return to that folder.

## Help finding reports

10/24/17 1:27:21 PM

Shared Reports ▾ Contains ▾ Callback 🔍 Refine 10/24/17 1:27:21 PM

| Name                                  | Owner         | Modified            | Location                                       |
|---------------------------------------|---------------|---------------------|------------------------------------------------|
| 📁 Callback                            | Administrator | 10/24/17 1:27:18 PM | ▶ Shared Reports > CX Insights                 |
| 📄 Callback Details Report             | Administrator | 10/24/17 1:27:18 PM | ▶ Shared Reports > CX Insights > Callback      |
| 📄 Callback Summary Report             | Administrator | 10/24/17 1:27:18 PM | ▶ Shared Reports > CX Insights > Callback      |
| 📄 Campaign Callbacks Summary Report   | Administrator | 10/24/17 1:27:19 PM | ▶ Shared Reports > CX Insights > Outbound Conf |
| 📄 Pre-activated Time Range (Callback) | Administrator | 10/24/17 1:27:21 PM | ▶ Shared Reports > CX Insights > [...]         |

You can use the search feature to easily find all reports with a given word or phrase in the report name:

1. Select the top level **CX Insights** folder (to search the entire folder).
2. At the top of the page, click the magnifying glass to open the search window.
3. Select a folder (for example **Shared Reports**) in which to search, enter a search term (for example **Callback**), and press **Enter** (or click the magnifying glass).
4. For more powerful search options, click **Refine**. Advanced search options appear, which you can use to refine your search based on various criteria, such as object type, owner, date, or description.

## Anatomy of a report

The diagram illustrates the anatomy of a report by comparing two different report views. On the left is a 'REPORT DETAILS' view, and on the right is a data grid view. Arrows and handwritten text explain the components and their functionality.

**REPORT DETAILS View (Left):**

- REPORT DETAILS** (Section Header)
- Report Filter:** (Date (ID) >= 1/1/2011 12:00:00 AM) And (Date (ID) < A
- PROMPT DETAILS** (Section Header)
- Prompt 1: Start Date  
1/1/2011
- Prompt 2: End Date  
12/31/2017 12:00:00 AM
- Prompt 3: Queue  
Prompt not answered
- Prompt 4: Channel  
Prompt not answered
- Prompt 5: Callback Type  
Prompt not answered
- Prompt 6: Tenant  
Prompt not answered
- Prompt 7: Minute Price  
0

**Data Grid View (Right):**

Data rows: 4 | Data columns: 1 - 10 of 28 ▶

| Attempted | Customer Connected | % Customer Connected |
|-----------|--------------------|----------------------|
| 19        | 24                 | 126.32%              |
| 19        | 24                 | 126.32%              |
| 19        | 24                 | 126.32%              |
| 19        | 24                 | 126.32%              |

**Annotations:**

- Arrows point from the **REPORT DETAILS** and **PROMPT DETAILS** sections to the text: *These information sections can optionally be closed once you have viewed them.* (with 'x' icons indicating close buttons).
- An arrow points from the data grid to the text: *The main section of most reports consists of a data grid.*

Each report is divided into several sections (except for the main section of the report, each section is called an 'editor'):

- **Report Details Editor** — provides information about the data in the report. You can optionally close this editor by clicking **x**.
- **Prompt Details Editor** — provides information about the prompt values used to run the report. You can optionally close this editor by clicking **x**.
- **The report grid** — In most cases, reports consist of a simple **grid**, illustrating the selected data. Some prompt and metric names shown in reports are self-explanatory, but some may require explanation; see the individual report descriptions (see the [list of reports](#)) for more information about specific prompts and metrics.
- Other editors appear if you open them, such as the **View Filter Editor**.

## What zero signifies in a report

Whenever the underlying query for a Genesys CX Insights report returns no rows, the report displays no data. For example, a query to retrieve activity for a particular agent for a shift that the agent did not work returns no data.

| Tenant   | Media Type | Time Range Key | Class | Interaction Type | Day        | Accepted Agent ST 1 | Accepted Agent ST 2 | Accepted Agent ST 3 | Accepted Agent ST 4 | Accepted Agent ST 5 | Accepted Agent ST 6 | Accepted Agent ST 7 | Accepted Agent ST 8 |
|----------|------------|----------------|-------|------------------|------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| Tenant A | Internal   | 2023-09-12     | 0001  | Internal         | 2023-09-12 | 1                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   |
|          |            |                |       |                  | 2023-09-12 | 2                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   |
|          |            |                |       |                  | 2023-09-12 | 3                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   |
|          |            |                |       |                  | 2023-09-12 | 4                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   |
|          |            |                |       |                  | 2023-09-12 | 5                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   | 0                   |

Zero Values in the Speed of Accept Report

For those Genesys CX Insights reports that do return rows, but in which a particular field is not applicable, the reports return a value of 0.

For example, this occurs when all interactions for a particular day are accepted within the first four service time intervals that are defined for a tenant, but none are accepted beyond the fourth interval. As a result, the Speed of Accept (seconds) Report—a portion of which is shown in the figure *Zero Values in the Speed of Accept Report*—displays 0 values for the each of the fifth through tenth intervals.

The reports also return 0 for measures when the underlying database columns on which measures are based hold 0 values. Additionally, when a report is based on a query that gathers data from more than one aggregation table, empty cells in reports are possible where other cells contain data.

For composite measures, such as percentages and averages, wherever a 0 count or 0 duration ensues, the reports display 0 for such measures. The average duration of calls placed on hold, for instance, is 0 in the circumstances where either no calls were placed on hold during the interval, or where the duration of held calls was 0 seconds (or a fraction of 1 second).

The custom reports that you create might behave differently depending on their design.

## The report grid

The main area of a typical report consists of a simple grid, optimized for on-screen viewing, but also easily printed to PDF, XLS or other formats. (For reports with a lot of columns or rows, you may find it easiest to view your reports as [PDFs](#).)

The first few columns of each report represent Attributes (also known as Dimensions). These are values that divide up the data, and their impact is cumulative, from left-to-right. For example, in the Agent Utilization Report (shown here), the first column divides the data by Tenant Name, the second column subdivides the tenant data by Media Type, the third column subdivides the tenant/media data by Agent Name, the fourth column subdivides the individual agent data by Interaction Type, and the fifth further breaks that down by Day.

Longer reports are divided across several pages.

Attributes (dimensions). These values subdivide the data.

Some reports contain more columns than can fit on screen.

| Tenant Name | Media Type | Agent Name             | Interaction Type | Day        | Offered | Accepted | Not Accepted | Responses | Avg Handle Time | Avg Engage Time | Avg Hold Time | Avg Wrap Time | Avg Consult Received Time | Avg Consult Received Wrap Time |  |
|-------------|------------|------------------------|------------------|------------|---------|----------|--------------|-----------|-----------------|-----------------|---------------|---------------|---------------------------|--------------------------------|--|

Depending on your access role and the report you are viewing, you can manipulate a report in several ways:

- **Sort**—Right-click in a column, and choose an option from the **Sort** menu, to sort the table by the order of that column. Or, choose **Sort Grid** to sort the table by more than one column. Not all columns can be sorted.
- **Drill**—Right-click in a column, and choose an option from the **Drill** menu, to drill up or down on the data in that column. For example, to change from viewing data for the Month, to viewing it for the Day, Hour, or even the Year. See [Drilling in report data](#). Not all columns can be drilled.
- **Filter**—Right-click in a column, and choose an option from the **Filter on** menu, to open the View Filter Editor, where you can select one or more conditions. See [Filtering report data](#).

Agent-based reports do not contain data that summarizes virtual interactions, virtual agent activity, and Interactive Voice Response (IVR) port activity. However, if IVRs are configured as handling resources in your environment, data that pertains to IVR ports is included in the business attribute and interaction detail reports.

## Video: Drill or filter in reports

### [Link to video](#)

This video describes how to read, drill, and filter historical reports in Genesys CX Insights.

## Controlling what data appears in a report

The screenshot displays the Genesys CX Insights report configuration interface. On the left is an **INDEX** panel with a close button (X) and a **Summary of your selections** section. The index lists six filters: 1 Report Date, 2 Agent Group, 3 Agent, 4 Media Type, 5 Interaction Type, and 6 Tenant. The main area on the right is divided into three sections:

- 1. Report Date:** Features a date input field showing "2/1/2017" and a calendar icon.
- 2. Agent Group:** Includes a "Search for:" field with a magnifying glass icon and a checked "Match case" option. Below is an "Available:" list of agent groups (AG1, AG123, Agent Group 1, Agent Group 2, AgentGroup1Ten, Chat distribution for processing, E-mail distribution for processing, and E-mail QA review group) and a "Selected:" list currently showing "(none)". Navigation arrows (right, double-right, left, double-left) are positioned between the lists.
- 3. Agent:** Similar to the Agent Group section, it has a "Search for:" field, a checked "Match case" option, an "Available:" list of agent identifiers (e.g., 601\_forTest::601\_forTest:601\_forTest:, 601\_forTes; 602\_forTest::602\_forTest:602\_forTest:, 602\_forTes; 602\_swTen1::602\_swTen1:602\_swTen1:, 602\_swT; 603\_swTen1::603\_swTen1:603\_swTen1:, 603\_swT; 604\_swTen1::604\_swTen1:604\_swTen1:, 604\_swT; 901::901:901:, 901 (901); 902::902:902:, 902 (902); A101\_sw1::A101\_sw1:A101\_sw1:, A101\_sw1 (A10; and A101\_sw2::A101\_sw2:A101\_sw2:, A101\_sw2 (A10), and a "Selected:" list showing "(none)". Navigation arrows are also present.

At the bottom of the Agent section, a pagination bar shows "1 - 30 of 41" with navigation icons.

In many cases, you may want to restrict what data is gathered into a report; for example:

- if your environment contains a large amount of data, some reports can become very long.

- if you want to see a report about just one aspect of the contact center, such as single agent group.

When you open any report, the report prompts appear, where you can customize the data that is taken into the report. The prompts available are specific to each report—the example shown here pertains to the Agent Conduct Report:

- For each prompt, enter or select appropriate values. Each prompt provides either a drop-down list or a search field and accompanying button.
- Use the Index, to the left of the prompts input area, to quickly jump to any section of the prompts.

In many cases, the default values are appropriate; if in doubt about a given prompt's effect, see the descriptions given below, or try running the report with default values to get a better idea of the result. Each report has a unique set of prompts from which you can select values for the attributes used in the report. For example, in the **Agents / Agent Conduct Report**, you can make the following prompt selections:

### **[+] Show: Prompts in the Agent Conduct Report**

| Prompt           | Description                                                                                                            |
|------------------|------------------------------------------------------------------------------------------------------------------------|
| Report Date      | Select the day for which to generate a report. (This report describes activity for a single day).                      |
| Agent Group      | Optionally, restrict the report to show information about specific groups.                                             |
| Agent Name       | Optionally, restrict the report to show information about specific agents.                                             |
| Media Type       | Optionally, restrict the report to show information only for specific Media Types.                                     |
| Interaction Type | Optionally, restrict the report to show information only for specific Interaction Types.                               |
| Tenant Name      | In multi-tenant environments, you can optionally restrict the report to show information only for the selected tenant. |

After running a report, you can further filter the data that appears in the report. These filtering options are powerful, and let you make more selections than those you made on the prompts page when you ran the report. You can add more than one filter on a report.

Use either of the following to methods to filter a report:

### Creating a filter using the View Filter Editor

Open the View Filter Editor to manually construct a filter.

1. Open and run a report. For example, **Agents > Agent Utilization Report**.
2. Click **Tools > View Filter**.  
The View Filter Editor appears.
3. Click **Add Condition**.  
The **Filter On** drop down list appears.
4. Click **Filter On**, and select a value on which to filter. For example, Agent Name will allow you to show only specified agent in the report.  
A list of Available agent data appears.
5. Double-click the name of each Agent to include (you can include one, several, or even all), and click **Apply**.  
You can add more than one filter on a report.

### Filtering on selections

Use **Filter On** to build a filter more quickly.

1. Open and run a report. For example, **Agents > Agent Utilization Report**.
2. Right-click a value that you'd like to filter on (a value in one of the attribute columns, such as an agent name)
3. Click **Filter on Selections**.  
The View Filter Editor appears, where you can modify the filter as needed.

## Drilling in report data

| Agent Name              | Interaction Type | Day        | Offered | Accepted | Not Accepted | Responses | Avg Handle Time | Avg Engage Time | Avg Hold Time | Avg Wrap Time |

You can *drill* on report data to see more detailed (or more general) information.

1. To drill on a report, first open and run the report.
2. Right-click a heading in the report; a context menu opens. If it is possible to drill on the metric on which you have clicked, **Drill** appears in the menu.  
The choices available vary depending on the type of data on which you click ('Drill down to Agent Name', 'Drill up to Month', 'Drill down to Interaction subtype', and so on). Not all data can be drilled. For example, right clicking the heading **Day** (in reports where that heading appears, such as **Agents > Agent Utilization Report**) gives you the option to drill to another time period, such as Month or Year. Arrows in the menu indicate whether a drill option is drilling 'Up' or drilling 'Down'.
3. Select one of the drill actions that appear. The report automatically updates to account for the change. Open the Drill menu again; the available options have now changed.

For more comprehensive drill options, click the **Data** menu, and select **Drill**. The **Drill Editor** appears, where you can drill on multiple columns, and access advanced options.

## Drill considerations

The ability to drill up or drill down within a report allows you to view results from a wider or narrower perspective, but it's important to understand the logic that Genesys CX Insights applies when you drill, as there are some cases where data can seem to disappear after you drill, or you see data that is not what you might expect.

Drilling occurs along the attribute hierarchies, for example, **up** from Agent to Agent Group, or **down** from Agent Group to Agent:

- Agent hierarchy: **Agent Group ↔ Agent Name**
- Campaign Group hierarchy: **Campaign Group ↔ Campaign**
- Interaction hierarchy: **Interaction Type ↔ Interaction Subtype**
- Service Type hierarchy: **Service Type ↔ Service Subtype**
- Time Interval hierarchy: **Year ↔ Quarter ↔ Month ↔ Day ↔ Hour ↔ 30 minutes**
- Queue hierarchy: **Queue Group ↔ Queue**

Unexpected results can occur in various situations, such as:

- When you run a report with date prompts for a specific sequence of days, and then drill up to a longer period of time, the report shows data for the entirety of the new period; however, this works only if the specific sequence of days includes the starting DATE\_TIME\_KEY for the time period to which you drill. Otherwise, the report can return no data. For example, if you initially run a report over a the 1st - 5th of the month, and then drill up to the month level, the report takes in data from the rest of the month. However, if you run it over another five day period -- say the 5th - 10th, and then drill up, the report returns no data.
- When agent-campaign results are displayed, drilling down from campaign to campaign group and then drilling up from agent to agent group can result in duplicate rows.
- Drilling down from aggregated results to the interaction- or interaction-segment level is not supported. (This is different from drilling along the Interaction hierarchy, which is based on interaction type and subtype (for example, Inbound/InboundNew), not on the legs of the interaction.)

## Printing or exporting report data

The image shows a two-part process. The top part is a dark-themed menu with options: 'Add to History List', 'Create Personal View', 'Share ...', 'Send Now...', 'Subscribe to', 'Export', 'Print...', and 'Full Screen Mode'. The 'Export' option is selected, opening a sub-menu with 'PDF', 'Excel with plain text', 'CSV file format', 'Excel with formatting', 'HTML', and 'Plain text'. A hand cursor points to 'PDF'. An arrow points from this menu to the bottom part of the image, which is a light-themed settings page titled 'Agent Utilization Report'. This page has sections for 'Export' (set to 'Whole report'), 'Scaling' (radio buttons for 'Adjust font to 100% of original size' and 'Fit to: 1 pages wide by 1 tall'), 'Orientation' (radio buttons for 'Portrait' and 'Landscape'), 'Page Header and Footer' (with an 'Edit Custom Settings...' button), 'Report Header' (with an 'Edit Custom Settings...' button), 'Print cover page' (checkbox), 'Cover page location' (radio buttons for 'Before report' and 'After report'), and a 'Show advanced options' button. At the bottom, there is a checkbox for 'Do not prompt me again.' and an 'Export' button.

*Exporting a report to PDF*

**Agent Utilization Report**

Export:

Scaling:

- ☒ Adjust font to  % of original size
- ☐ Fit to:  pages wide by  tall

Orientation:

- ☒ Portrait
- ☐ Landscape

Page Header and Footer:

Report Header:

☐ Print cover page

- ☒ With Filter Details
- ☐ With Report Details

Cover page location:

- ☒ Before report
- ☐ After report

☐ Do not prompt me again.

You can easily export your reports to a variety of formats, including PDF (useful for printing) or Excel/CSV (useful if you want to take the data into other applications or manually edit the output).

1. Click **Report Home > Export > PDF**.  
The **PDF options** page appears in a new browser tab.

2. Optionally, select options to control how the report will be exported, such as page size, orientation, or other aspects of formatting. For many reports, it is a good idea to select **Fit to 1 Pages Wide** and **Landscape**.
3. Click **Export**. The PDF opens automatically in the browser tab. If you are happy with the output, you can click **Download** (to save the file) or **Print**.

Some users find it useful to export data to a spreadsheet format, as it is then possible to more easily sort and view the data, particularly if there is a lot of data in your report, due to the larger screen area available in a spreadsheet application, such as Microsoft Excel. This is particularly true if you have a great deal of data in your report, or in the case of reports that just can't easily fit in a browser window because they contain many columns or rows.

## Scheduling the delivery of reports

The screenshot shows the 'My Subscriptions' page in CX Insights 9.0.004.00\_demo. The 'Subscription' section is expanded, showing the 'E-mail Subscription' configuration form. The form includes the following fields and options:

- Name:** Agent Conduct Report 2/1/18 12:06:52 AM
- Report:** Agent Conduct Report
- Schedule:** Every Evening - 6 PM (dropdown menu)
- To:** Ms Manager (dropdown menu)
- Send:** Data in email (dropdown menu)
- Delivery Format:** HTML (radio button), Compress contents (checkbox), Expand page-by fields (checkbox)
- Burst...** (button)
- Subject:** Agent Conduct Report
- Message:** (text area)
- ☐ Send a preview now
- + Advanced Options** (button)

A black oval highlights the 'Schedule', 'To', and 'Send' fields. Another black oval highlights the 'Send a preview now' checkbox.

You can run a report regularly--every day, or every week, for example. Genesys CX Insights enables you to create Subscriptions, which schedule the delivery of one or more reports into your Genesys CX

Insights History List, or send them to you automatically by email or SFTP.

### Important

You must be an administrator (or a member of the group “CX Insights report developers” or “CX Insights report editors”) to configure an email address. Otherwise, contact your administrator to complete steps 2 and 3 for you (steps are provided by MicroStrategy, in the article [KB30581](#)).

## Schedule email delivery

To schedule the delivery of a report by email, first define an email address, and then subscribe to the report using that address:

1. Log in to CX Insights.
2. Click your user name, select **Preferences**, and click **E-mail Addresses**.
3. In the **Email Addresses** list, click **Add a New Address**. Enter the **Address Name** (a short name to identify the account), the **Physical Address** (the email address), and choose the **Device**. This is the email type, such as **Outlook**.
4. Click **Save**.
5. In the breadcrumbs, click **CX Insights** to return to the Home page.
6. Open the **Shared Reports** folder, and navigate to the report you want to schedule.
7. Hover over the report name/description, and several options appear below the description. Click **Subscriptions**.
8. On the **My Subscriptions** page, scroll down and click **Add email subscription**. The **E-mail Subscription** options appear, as shown in the adjoining figure.
9. Choose an option from the **Schedule**, and **To** lists. You can add more than one recipient in the **To** list.
10. Optionally, test the subscription by selecting **Send a preview now** (if you do, an email typically arrives within a few minutes). Click **OK**.

### Tip

In some scenarios, email messages that notify users of scheduled reports can contain unexpected characters in the email subject line. If you encounter this issue, see the Known Issue [GCXI-2327](#)

If you create a subscription for a user who is, or later becomes, disabled, MicroStrategy does not send the report to that user, though it continues to send it to other subscribers.

In release 9.0.010 or later, if you have created subscriptions for a user, use the following steps to transfer those subscriptions to another user (without having to recreate them from scratch):

1. Open **MicroStrategy Products > Command Manager**. A log-in dialog appears.
2. Log in as user who is a member of both the **General Developers** group and the **General Users Administrators** group.
3. Enter the following command into a script:

```
ALTER EMAILSUBSCRIPTION "<subscription_name>" OWNER "<user_name>" IN PROJECT  
"<project_name>";
```

For example:

```
ALTER EMAILSUBSCRIPTION "Agent Conduct Report 3/21/19 2:30:15 PM" OWNER  
"Administrator" IN PROJECT "CX Insights";
```

4. On the menu, click **Connection > Execute**.

For information about user groups (including **General Developers** group and the **General Users Administrator**) see the *Genesys CX Insights Deployment Guide*. If you have difficulty, contact Genesys Customer Care for assistance.

## Schedule FTP delivery

Beginning with release 100.0.021.00, Genesys CX Insights supports scheduled delivery of the standard reports using FTP / SFTP.

### Important

This feature is not intended to be used as a data dump tool to reliably extract large volumes of data. This is because report export can fail, or can occur not-on-schedule, due to maintenance activities, or simply due to a large volume of data. If you need to reliably transport Genesys Info mart data, use the Genesys Info Mart Data Export feature (also known as BI Data Feed), which is described Genesys Info Mart Physical Data Model documentation for your RDBMS ([Microsoft SQL Server](#), [PostgreSQL](#), [Oracle](#)).

1. Configure FTP delivery by setting FTPDEF\* variables in **gcxi.properties**, for example:

```
FTPDEF1=DeviceName=myFTP1;Protocol=2;ServerName=ftp_server_name_1;Port=22;RemoteDir=/subs/  
files/  
location;UserName=user_name_with_access;FTPServerPassword=password;CreateFolders=true;AppendUserPath=t  
FTPDEF2=DeviceName=myFTP2;Protocol=2;ServerName=ftp_server_name_2;Port=22;RemoteDir=/GCXi/  
files/  
location;UserName=user_name_with_access;FTPServerPassword=;CreateFolders=true;AppendUserPath=true;Over
```

2. In MicroStrategy Developer:
  1. From the Developer **Folder List**, expand **Administration**, expand **Delivery Managers**, and select **Devices**.
  2. Right-click in the **Device List** area, select **New**, and then **Device**.
  3. Select **FTP** and click **OK**.

4. Select **SFTP** as the protocol type, and enter the information required to connect to your SFTP server.
  5. Click **OK**.
  6. If you are previously authenticated into Genesys CX Insights, you must refresh your login session to make the device available.
3. In Genesys CX Insights:
    1. Open the **Shared Reports** folder, and navigate to the report you want to schedule.
    2. Hover over the report name/description, and several options appear below the description. Click **Subscriptions**.
    3. On the **My Subscriptions** page, scroll down and click **Add FTP subscription**. The **FTP Subscription** options appear.
    4. Enter appropriate values for **Schedule**, **Location**, **Delivery Format**, and other values as required.
    5. Click **OK**.
  4. Optionally, you can provide FTP credentials using the file **gcxi-secrets.yaml**. For example:

```
<...>
FTPDEF1__FTPServerPassword: <password1>
FTPDEF2__FTPServerPassword: <passwords>
FTPDEF1__UserName: <username>
```

where <password1>, <passwords>, and <username> are appropriate values. Note that two underscores are required after the prefix (FTPDEF\*\_\_).

For example:

```
FTPDEF1__FTPServerPassword: R2VuZXN5c18w
FTPDEF2__FTPServerPassword: R2VuZXN5czE=
FTPDEF1__UserName: Z2N4aQ==
```

## Enabling Languages on the server

Several languages are supported by Genesys CX Insights, and the files to support them are included in the IP. However, before users can select a language, an administrator must enable it on the server.

Use the following steps to enable a language on the server.

1. Execute the following command to back up the GCXI meta db:

```
kubectl apply -f k8s/gcxi-backup.yaml
```
2. Execute the following command to stop currently running containers:

```
kubectl scale deploy/gcxi-secondary --replicas=0
kubectl scale deploy/gcxi-primary --replicas=0
```
3. Edit the **gcxi.properties** file, and add the **LANGS** variable:

```
LANGS=<lang_code_1>,<lang_code_2>,...<lang_code_N>
```

where each <lang\_code> is a value from the table in [Supported languages](#). The first value added (<lang\_code\_1>) becomes the default language. For example, to make Chinese (simplified) the default language, and enable both German (Germany) and Japanese:

```
LANGS=zh-CN,de-DE,ja-JP
```

Note the following:

- If no value is set for the LANGS variable, en-US is used.
  - The default language is controlled by the the first value added to the LANGS variable, and can be any language other than en-US. If you wish to use en-US as the default, make any other language the default, and then change the language using the steps in [Changing the language used in the reports](#).
  - When upgrading to a later GCXI release in scenarios where you have set a default value other than en-US, you must set a value for the LANGS variable in **gcxi-properties**, or GCXI will revert to en-US for the default language. However, user preferences (as set in [Changing the language used in the reports](#)) are preserved after an upgrade.
  - The format of the <lang\_code> variables changed beginning in release 9.0.010.
4. Execute the following command to load gcxi.properties into Kubernetes:

```
kubectl delete configmap gcxi-config
```

```
kubectl create configmap gcxi-config --from-env-file=k8s/gcxi.properties --namespace genesys
```

5. Execute the following commands to start the PRIMARY container:

```
kubectl scale deploy/gcxi-primary --replicas=1
```

Wait until PRIMARY is done (wait until Tomcat is up, and MicroStrategyWeb page is available).

6. Execute the following command to start the SECONDARY container:

```
kubectl scale deploy/gcxi-secondary --replicas=1
```

Users can now change the language. (See [Changing the language used in the reports](#).)

### Note the following:

- When you enable a language on the server, the reports and GUI are automatically switched to that language.
- When non-administrative users change language preferences, they will see a list of language choices that includes languages you have not enabled; to avoid confusion, if users will need to switch languages, you should notify them about what language you have enabled for them to use.
- As an administrator, you can optionally change language default settings for all users; log in as an administrator, and click **Preferences** -> **Project Defaults** -> **General**.

## Supported languages

Genesys CX Insights provides support to translate (localize) the GUI and Genesys CX Insights reports.

See the appropriate table to match your deployment:

- [Language support for the Genesys CX Insights project](#)
- [Language support for the Genesys CX Insights for iWD project](#)

**Language support for the Genesys CX Insights project**

| Language                              | LANGS variable value |
|---------------------------------------|----------------------|
| Arabic (release 9.0.010.04 and later) | ar-SA                |
| Chinese (simplified)                  | zh-CN                |
| Dutch (release 9.0.014 and later)     | nl-NL                |
| French (Canada)                       | fr-CA                |
| French (France)                       | fr-FR                |
| German (Germany)                      | de-DE                |
| Italian                               | it-IT                |
| Japanese                              | ja-JP                |
| Korean (release 9.0.010.04 and later) | ko-KR                |
| Polish (release 9.0.014 and later)    | pl-PL                |
| Portuguese (Brazil)                   | pt-BR                |
| Russian                               | ru-RU                |
| Spanish (Latin America)               | es-419               |
| Turkish                               | tr-TR                |

Support for localization of the Genesys CX Insights for iWD is available in release 9.0.014 and later.

**Language support for the Genesys CX Insights for iWD project**

| Language                             | LANGS variable value |
|--------------------------------------|----------------------|
| Chinese (People's Republic of China) | zh-CN                |
| German (Germany)                     | de-DE                |
| French (Canada)                      | fr-CA                |

In release 9.0.013 and earlier, you cannot change the language used in *Genesys CX Insights for iWD* reports.

## Changing the language used in the reports

The screenshot shows the 'General' settings section of the Genesys CX Insights user interface. The 'Language' dropdown menu is expanded, displaying a list of available languages. 'German (Germany)' is currently selected and highlighted. To the right of the language list is a button labeled 'Show advanced options'. Other settings visible include 'Default start page' set to 'Home', 'Color Theme' set to 'Red', and 'Dynamic HTML' set to 'Off'. The 'Accessibility mode' is set to 'Default', and 'Drop down menus' are set to 'Open menus'. The 'Sort' option is set to 'Alphabetically in Outline mode'.

Before you can select a language, an administrator must enable it on the server. Only one language, in addition to US English, is enabled at any time. Talk to your administrator to find out what language is available for your use (or see [Enabling Languages on the server](#)). Changes described in this procedure apply only to your own sessions, not to other users.

Use the following steps to change the language used in the GUI and reports.

1. Log in to Genesys CX Insights.
2. Click the drop-down menu next to your user name, and select **Preferences**.
3. On the **User Preferences > General** page:
  1. Change the language used in the GUI: In the **Language** section, select a language from the list.
  2. Change the language used in the reports: Click **Show advanced options**, from the **Metadata** list, select a language.
4. Scroll to the bottom of the page, and click **Apply**.

5. Use the browser's back arrow, or click in the breadcrumbs, to continue.

## Important

Not all languages listed in the GUI are enabled for your use. Check with your administrator.
