# Billing Data Metrics

The Billing Data folder contains objects that enable the organization and measurement of customer usage data related to billing.

Note the following:

- Unless otherwise noted, metrics that show time, display a whole integer representing the number of seconds.
- For detailed information about the different metric types, see [Project terminology and concepts](#).

## Important

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

The following Metrics are available in this folder and are described on this page.

### Billing Data

- [Concurrent User Count](#)
- [IVR Minutes](#)
- [Named User Count](#)
- [Peak IVR Ports](#)
- [Resource Key BDS](#)

## Folder: Billing Data

<b>Metric name: Concurrent User Count</b>		<b>Folder:</b>  Billing Data
<b>Introduced:</b> 100.0.023.0000		
<b>Description:</b> The peak number of unique agents that were concurrently logged in for a voice media type, during the selected period.		
<b>Source or Calculation:</b> Sum([Seats Voice Concurrent])		<b>Used in:</b>  • Inbound Voice Report
<b>Media type:</b>		
<b>Data type:</b> <b>Metric type:</b>		

[>> Back to list](#)**Metric name: IVR Minutes****Introduced:** 100.0.023.0000**Folder:**

Billing Data
