Genesys Info Mart Physical Data Model for a Microsoft SQL Server Database

Table CAMPAIGN GROUP STATE

Table CAMPAIGN_GROUP_STATE

Description

Modified: 8.5.003 (in Oracle, fields with VARCHAR data types use explicit CHAR character-length semantics)

In partitioned databases, this table is not partitioned.

Allows facts to be described based on attributes of an outbound campaign group status. Each row describes one campaign group status. Rows exist for the Loaded, Started, and Unloading statuses.

Tip

To assist you in preparing supplementary documentation, click the following link to download a comma-separated text file containing information such as the data types and descriptions for all columns in this table: Download a CSV file.

Hint: For easiest viewing, open the downloaded CSV file in Excel and adjust settings for column widths, text wrapping, and so on as desired. Depending on your browser and other system settings, you might need to save the file to your desktop first.

Column List

Legend

Column	Data Type	P	M	F	DV
CAMPAIGN_GROU	JPInSTATE_KEY	X	Χ		
CAMPAIGN_GROU	JPv <u>a</u> rtAter(32)/nvar	char(32)			
CAMPAIGN_GROU	JPvarther(82)Drevar	char(32)			
CREATE_AUDIT_k	(EYumeric(19)		Χ	Χ	
UPDATE_AUDIT_k	(EY umeric(19)		Χ	X	

CAMPAIGN_GROUP_STATE_KEY

The primary key of this table and the surrogate key that is used to join this dimension table to the fact tables.

CAMPAIGN GROUP STATE

The campaign group session state. This field is set to one of the following values:

- Null
- Loaded
- Started
- Unloading

This value can change with localization.

CAMPAIGN GROUP STATE CODE

The code for the campaign group session state. This field is set to one of the following values:

- NULL
- LOADED
- STARTED
- UNLOADING

This value does not change with localization.

CREATE_AUDIT_KEY

The surrogate key that is used to join to the CTL_AUDIT_LOG control table. The key specifies the lineage for data creation. This value can be useful for aggregation, enterprise application integration (EAI), and ETL tools — that is, applications that need to identify newly added data.

UPDATE_AUDIT_KEY

The surrogate key that is used to join to the CTL_AUDIT_LOG control table. The key specifies the lineage for data update. This value can be useful for aggregation, enterprise application integration (EAI), and ETL tools — that is, applications that need to identify recently modified data.

Index List

No indexes are defined.

Subject Areas

• Campaign_Group_State — Represents campaign groups from the perspective of states they go through, such as "Loaded", "Started", and "Unloading".
