Genesys Info Mart Physical Data Model for an Oracle Database

Table SDR_SURVEY_S1

12/17/2025

Table SDR_SURVEY_S1

Description

Introduced: 8.5.005. Supported in certain Genesys Engage cloud deployments only.
Modified: 8.5.010 (in Microsoft SQL Server, data type for the SQ* columns modified in single- and multi-language databases)

In partitioned databases, this table is not partitioned.

This dimension table enables Session Detail Record (SDR) facts to be described based on responses to survey questions SQ1-SQ5. The capital letter (S) preceding the digits in the table name indicates that a string response is expected.

Important

Note for customers using Data Export Capability: If the target database for exported Info Mart data is hosted on Microsoft SQL Server in your deployment, and if you use a Genesys-provided **update_target_*.sql** script to create or update the target schema, be aware of the following consideration: Prior to Genesys Info Mart release 8.5.014.34, the sizes of some columns in this table in the Microsoft SQL Server target database differ from what is documented on this page.

Tip

To assist you in preparing supplementary documentation, click the following link to download a comma-separated text file containing information such as the data types and descriptions for all columns in this table: Download a CSV file.

Hint: For easiest viewing, open the downloaded CSV file in Excel and adjust settings for column widths, text wrapping, and so on as desired. Depending on your browser and other system settings, you might need to save the file to your desktop first.
