Genesys Info Mart Physical Data Model for a PostgreSQL Database

Table DIALING MODE

Table DIALING_MODE

Description

Modified: 8.5.014.34 (in Microsoft SQL Server, data type for the DIALING_MODE and DIALING_MODE_CODE columns modified in single-language databases); 8.5.003 (in Oracle, fields with VARCHAR data types use explicit CHAR character-length semantics)

In partitioned databases, this table is not partitioned.

This table allows facts to be described based on attributes of an outbound campaign dialing mode. Each row describes one dialing mode.

Tip

To assist you in preparing supplementary documentation, click the following link to download a comma-separated text file containing information such as the data types and descriptions for all columns in this table: Download a CSV file.

Hint: For easiest viewing, open the downloaded CSV file in Excel and adjust settings for column widths, text wrapping, and so on as desired. Depending on your browser and other system settings, you might need to save the file to your desktop first.

Column List

Legend

Column	Data Type	Р	M	F	DV
DIALING_MODE_KEnteger		X	X		
DIALING_MODE	varchar(32)				
DIALING_MODE_CODEchar(32)					
CREATE_AUDIT_k	(E Yumeric(19)		X	X	

Column	Data Type	P	M	F	DV
UPDATE_AUDIT_KEYumeric(19)		Χ	Χ		

DIALING MODE KEY

The surrogate key that is used to join this dimension table to the fact tables.

DIALING MODE

Modified: 8.5.014.34 (in Microsoft SQL Server, data type changed from varchar to nvarchar in single-language databases)

The dialing mode. This field is set to one of the following values:

None

- Progressive with seizing
- Progressive GVP

- Unknown Dialing Mode
- · Predictive with seizing
- Predictive GVP

Predictive

Power

· Power GVP

DIALING MODE CODE

Modified: 8.5.014.34 (in Microsoft SQL Server, data type changed from varchar to nvarchar in single-language databases)

The dialing mode code. This field is set to one of the following values:

NONE

- PROGRESSIVE_WITH_SEIZING
- PROGRESSIVE_GVP

- UNKNOWN_DIALING_MODE
- PREDICTIVE_WITH_SEIZING
- PREDICTIVE GVP

PREDICTIVE

This value does not change with localization.

CREATE_AUDIT_KEY

The surrogate key that is used to join to the CTL_AUDIT_LOG control table. The key specifies the lineage for data creation. This value can be useful for aggregation, enterprise application integration (EAI), and ETL tools — that is, applications that need to identify newly added data.

UPDATE AUDIT KEY

The surrogate key that is used to join to the CTL_AUDIT_LOG control table. The key specifies the lineage for data update. This value can be useful for aggregation, enterprise application integration (EAI), and ETL tools — that is, applications that need to identify recently modified data.

Index List

No indexes are defined.

Subject Areas

• Contact_Attempt — Represents outbound campaign contact record attempts. An attempt may or may not include dialing.
