Genesys Rules Authoring Tool Help

Exporting Linear Rules

12/15/2025

Exporting Linear Rules

You can export linear rules in GRAT. You might want to export your rules to back them up or move them to another server, and then import them back in.

You can export an entire rule package containing the rule definitions, business calendars, and references to the templates and versions that the rule package is dependent on. Refer to **Exporting Rule Packages** for details.

To export a linear rule:

1. Navigate to the rule package to which the linear rule belongs in the Explorer Tree (verify that you have selected the correct Tenant from the **Tenant** drop-down list). Select the correct node in the Explorer Tree (the level at which the rule was defined) and click on the **Rules** tab.

   > ### Important
   > You can also use the **Search** feature to locate rules.

2. Locate the rule in the list, select it, and select **Export Rule** from the drop-down in the lower panel. There is an option to save the exported rule as an .xml file only.

3. You can either **Open** or **Save** the exported rule file.
