# Genesys Skills Management Automated Install and Upgrade Guide

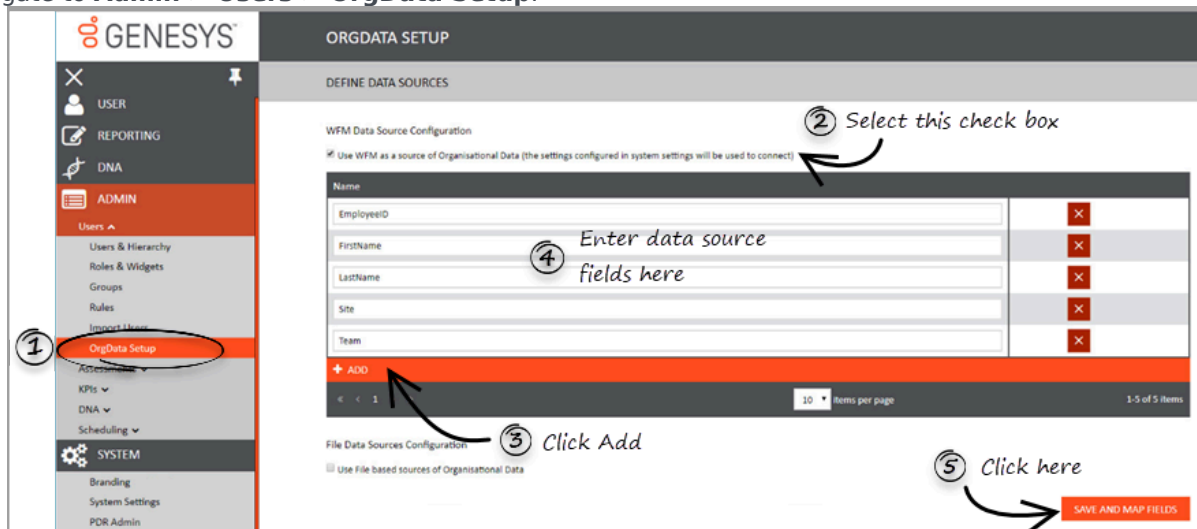

Configuring WFM Fields as Data Source

12/12/2025

# Configuring WFM Fields as Data Source

Follow the steps below to configure WFM as the data source for OrgData.

1. Navigate to **Admin > Users > OrgData Setup**.

2. On the **Define Data Sources** page, in **WFM Data Source Configuration** section, select the check box **Use WFM as a source of Organisational Data (the settings configured in system settings will be used to connect)**.
3. Click **+ Add** to create a new WFM data source.
4. Enter the name of the WFM data source field or column that will be used.

## Important

Userid, Employeeid, FirstName, LastName and CacheData are default fields in WFM, out of which CacheData is automatically mapped and you do not have to setup explicit mapping.

Note that some fields are specific to a WFM application. Such fields are:

1.
  - Genesys-specific fields: Site, Team, Email
  - Teleopti-specific fields: Site, Team, Email, ADLogin, AppLogin
  - NICE (IEX)-specific fields: MUName

1. Repeat steps 3 and 4 until you add all the required WFM data source fields that you wish to import.
2. Click **Save and Map Fields**.

## Updating WFM Data Source Fields

The WFM specific data source fields are case sensitive. Hence, Genesys recommends to use the source field names carefully during configuration.

In case you want to update or correct any data source field, follow the below procedure.

1. Navigate to the **Define Data Sources** page and delete the incorrect data source by clicking the **X** (delete) button.
2. Click **Save and Map Fields**.
3. Click **Previous**.
4. Refresh the **Define Data Sources** page by pressing **F5** or **Ctrl + R** keys.
5. Add the data source fields again with the correct spelling and case by following Configuring WFM Data Source Fields procedure.
6. Re-map the data source fields to the User Fields.
7. Click **Save**.

## Mapping WFM Data Source to User Fields

You can map the WFM data source fields to the Skills Management User Fields by performing the following procedure. Note that, this procedure is a continuation of Configuring Data Source Fields procedure. You can map the data source fields only at the end of configuration procedure, that is, while saving them.

1. Click "+ ADD" at the bottom of **Map to User Fields** page, to create a new data source.

The screenshot shows the 'ORGDATA SETUP' page with the 'MAP TO USER FIELDS' tab selected. The table has columns for 'Data Source', 'Merge Method', 'Source Field', 'User Field', 'Is Key', and a delete button. The 'Data Source' column has a dropdown menu with 'WFM' selected. The 'Merge Method' column has a dropdown menu with 'Append' selected. The 'Source Field' column lists 'FirstName', 'LastName', 'EmployeeID', 'EmployeeID', 'Site', and 'Team'. The 'User Field' column lists 'First Name', 'Last Name', 'Login ID', 'Positionid', 'Site', and 'Team'. The 'Is Key' column has checkboxes. The delete button is a red 'X' icon. Annotations include: 1. Click Add (bottom left), 2. Select Data Source (left side), 3. Select Merge Method (top right), 4. Click Add (bottom left), 5. Map Source to User Fields here (center), and 6. Click Save (bottom right).

Data Source	Merge Method	Source Field	User Field	Is Key	
WFM	Append	FirstName	First Name	<input type="checkbox"/>	<input type="button" value="X"/>
WFM	Append	LastName	Last Name	<input type="checkbox"/>	<input type="button" value="X"/>
WFM	Append	EmployeeID	Login ID	<input checked="" type="checkbox"/>	<input type="button" value="X"/>
WFM	Append	EmployeeID	Positionid	<input type="checkbox"/>	<input type="button" value="X"/>
WFM	Append	Site	Site	<input type="checkbox"/>	<input type="button" value="X"/>
WFM	Append	Team	Team	<input type="checkbox"/>	<input type="button" value="X"/>

2. In the **Data Source** column, select the source from which you will import the data.  
You can either select **WFM** or a **File Name** based on your configuration in the **Define Data Sources** page.
3. In the **Merge Method** column, select the method which must be applied to merge the Data

Source to User Fields. You can select:

- **Append** – this method adds all new data source fields to the existing User Fields.
  - **Update and Append** – this method updates existing User Fields with the imported changes and creates new User Fields.
  - **Update Only** – this method updates existing User Fields with imported changes and does not create new User Fields.
  - **New Rows Only** – this method only creates new User Fields.
4. Click “+ ADD” within the inner table to create a new Source to User Field mapping. You can do the mapping by specifying the following fields:
    - **Source Field** column – select the WFM field from the drop down.
    - **User Field** column – select the corresponding Skills Management field from the drop down.
    - **Is Key** – select this check box if you want to use the current field as the Unique Identifier. For example, Login ID field.
  5. Repeat the above step until you configure all the User Fields that must be imported from the WFM application.
  6. Click **Save**.
