Third-Party Recording with MCP and RM

SUMMARY: A new configuration option enables MCP to use the same Resource Manager for third-party recording that was used for incoming requests. (GVP-21310)

Option: `userouteonrecording`
Section: `sip`
Valid Values: `true` or `false`
Takes effect: immediately, on a per-session basis.

- Set to `true` to specify that for third-party recording, MCP will use the same Resource Manager that was used for incoming requests, which increases the likelihood of reaching an active Resource Manager. **Note:** This setting overrides `vrmrecorder.sip.routeset`.

- Set to `false` to specify that MCP use `vrmrecorder.sip.routeset` if present. Otherwise, MCP will not set the Route header.
