GVP Documentation Supplement

Audioinexpr attribute is not valid

5/5/2025

Audioinexpr attribute is not valid

SUMMARY: The tag "audioinexpr" should be updated to reflect the proper tag of "gvp:audioinexpr".

The next publication of the GVP 8.1 Voice XML Help will include this revision:

TOPIC: VoiceXML Tags

SECTION: The "Field" and "Recognizing Recorded Utterance" sections

Description: In the "GVP 8.1 Voice XML Help" document, there are references of the attribute audioinexpr in the "Field" and the "Recognizing Recorded Utterance" sections.

While almost all references in the "Field" section properly label the attribute as `gvp:audioinexpr`, the references in the "Recognizing Recorded Utterance" section label it incorrectly as `audioinexpr`.

If you try to build an application with the attribute `audioinexpr` the validation will fail in both Composer and GVP. So, all references to `audioinexpr` must be updated to reflect `gvp:audioinexpr` in both these sections, including the use cases where sample vxml is provided for testing.
