Correction: <tt>bargein</tt> property's behavior with interpreters

4/21/2025

Correction: `bargein` property's behavior with interpreters

SUMMARY: Behavior of the `bargein` property with GVP interpreters is missing from the VXML Help. (GVP-7433)

The next publication of the GVP 8.1 Voice XML Help will include this revision:

HELP TOPIC: Standard VoiceXML > Properties
SECTION: Prompt and Collect Properties Barge-in
ADD THE RED TEXT to the existing table row:

Property	Description	Default Value
`bargein`	Controls whether user input can be collected before prompts have finished playing: • `true`—Any user input can barge in during prompts. • `false`—No user input can barge in during prompts. **How `bargein` interacts with interpreters** In the legacy VoiceGenie interpreter, the application can set the value of the `bargein` property to `dtmf`. When this value is set, only DTMF input stops the prompt, whereas a start-of-speech that is detected by the speech recognizer does not. The Next Generation Interpreter (NGI) does not support this feature. In NGI, VCR controls are enabled even though `bargein` is set to `true`. For example, pressing 5 will pause audio that is playing.	`true`
