GVP Documentation Supplement

Enable MCP to accept the audio skip duration value specified in a VCR Control application

5/4/2025

Enable MCP to accept the audio skip duration value specified in a VCR Control application

SUMMARY: How to correctly specify the audio skip duration value.

The next publication of the GVP 8.1 Voice XML Help will include this revision:

TOPIC: Properties

SECTION: Audio Control Properties

ADD THIS TEXT:

When MCP does not accept the audio skip duration value specified in a VCR Control application, some possible reasons are:

- For the Next Generation Interpreter (NGI), you must specify property names in lowercase.
- You must use `com.genesyslab`.
- When you specify a time, you must specify a unit of measurement (no unit is assumed by default). Specify `s` (seconds) or `ms` (milliseconds) at the end of the value.

For example, this incorrect specification:

```
<property name= "COM.VOICEGENIE.AUDIO.SKIPDURATION" value = "9000">
```

should be corrected to read:

```
\<property name= "com.genesyslab.audio.skipduration" value = "9000ms" />
```
