API Reference 2

Description

This method retrieves the pages for a given identity.

Request

| Method | GET | | |
|-----------------------|--|-----------|--|
| URL | /identities/\${identityId}/pages | | |
| Parameters | | | |
| Name | Value | Mandatory | Description |
| \${identityId} | string | yes | Identity identifier. |
| age | integer | no | Pages' maximum age in seconds. Older pages will not be returned. |
| include_events | • true • false | no | If true, the returned pages contain the reference list of associated events. |
| include_events_detail | true (if include_events= true)false | no | If true, the returned pages contain the associated events. You can only use this parameter if include_events is set to true. |
| url | string | no | Page URL used to filter the results. |
| title | string | no | Page title used to filter the results. |
| category | string or "all categories" | no | A specific category name or the "all categories" key, which means that the results include any page associated with a category or a combination of categories. |

API Reference 3

Response

The History REST API answers with HTTP codes for every request. The following table shows the correct response for a successful request. See HTTP Response Codes and Errors for further details on the possible codes that this request can return.

| HTTP code | 200 |
|------------|-------------------------------|
| HTTP Title | OK |
| Body | JSON Array of Page resources. |
