Web Services and Applications Deployment Guide

Deploying the web application for 8.5.201.50 or later

Deploying the web application for 8.5.201.50 or later

Important

If you're deploying Web Services and Applications version 8.5.201.09 or earlier, complete the steps on Deploying the web application for 8.5.201.09 or earlier instead.

As of version 8.5.201.18, you can install Web Services as a service. Complete the following steps for each Web Services node.

Start

- Create a new folder on your Web Services node. For example, web-services. This is the home folder for the web application.
- 2. Copy the **gws.jar** file from the installation CD to your new Web Services home folder.
- 3. Copy the installation CD/etc/default/gws file to the /etc/default folder on your Web Services host.
- 4. Copy the installation_CD/etc/init.d/gws file to the /etc/init.d folder on your host.
- 5. Open /etc/default/gws on your host and update the following environment variables to values appropriate for your Web Services node:
 - GWS_H0ST This value should match the Jetty host you'll define later in the jetty section of the application.yaml configuration file.
 - GWS_PORT This value should match the Jetty port you'll define later in the jetty section of the **application.yaml** configuration file.
 - GWS_HOME The Web Services home folder you created in Step 1.
 - GWS_LOGS The location where you want Web Services to store log files. If this folder doesn't exist, Web Services creates it during application startup.
 - GWS_TEMP The location where you want Web Services to store temp files. If this folder doesn't exist, Web Services creates it during application startup.
 - GWS_CONF The location where you want to store the Web Services configuration files. If you don't specify a value for GWS_CONF, Web Services uses GWS_HOME/**etc**.
- Create the GWS_CONF folder you specified in Step 5. If you didn't set GWS_CONF, create a folder called etc in GWS_HOME — for example, web-services/etc.
- 7. Create the following configuration files in the folder you created in Step 6. You can simply copy the files from *installation_CD/config-templates* and remove the .sample extension. You'll learn more about the settings in these files as you go through the configuration steps for Web Services and its features later in this guide.
 - application.yaml
 - · elasticsearch.yml

- · hystrix.properties
- logback.xml
- statistics.yaml
- 8. Copy the **routing-templates** folder from **installation_CD/routing-templates** to your GWS_HOME folder.
- 9. Create the user group gws.
- 10. Create the **gws** user in the **gws** user group. The user should have read and write permissions for the folders defined in the GWS_HOME, GWS_LOGS, GWS_TEMP, and GWS_CONF environment variables.
- 11. Use the following command to register the new service on your host: chkconfig gws on

End
