ActiveMQ—JMS Capture Point Application

This page provides an example of how to configure a JMS Capture Point Application object when using ActiveMQ.

Creating a Capture Point application

1. On the **Application Options** tab, edit the **setting** section:
    ```
    capture-point-type=jms

    inbound-queue-name=inbound

    error-queue-name=error

    processed-queue-name=processed

    notification-queue-name=notification

    xsl-inbound-transform-path=./iwd_scripts/iWD2IxnServerTransformer.groovy (points to
     the default iWD Compatibility scripts)

    xsl-outbound-transform-path=./iwd_scripts/IxnServer2iWDTransformer.groovy

    username=(as configured in the connection factory)

    password=(as configured in the connection factory)

    jms-initial-context-factory=org.apache.activemq.jndi.ActiveMQInitialContextFactory

    jms-provider-url=tcp://<activemq_host>:<activemq_port>

    jms-connection-factory-lookup-name=ConnectionFactory
    ```
2. On the **Connections** tab, add the Interaction Server that will use this JMS Message queue.
