Deactivating a Bundle Set

12/17/2025

Deactivating a Bundle Set

If you no longer require the use of a bundle set, you can stop the calculation of the bundle set by changing the `valid_to` date.

1. Change the date of the `lrm_bundle_set` in the Bundle File to yesterday's date (in UTC time zone).

2. Upload the new bundle file using the GAX wizard.

Even though you have changed the `valid_to` date in the Bundle File to yesterday's date, the report calculation for yesterday's date (in UTC time zone) is not affected because the bundle is still active for yesterday's date.

The information from the Bundle File is imported into the Configuration Server and deactivates the Bundle in your system. From this point forward it is no longer included in calculations and reports.
