TRedirectCall

Description

Requests that the call be redirected, without an answer, from the party specified by the parameter `dn` to the party specified by the parameter `dest_dn`.

Parameters

Name	Description
<code>server</code>	Local server handle to the T-Server in question.
<code>dn</code>	Directory number of the telephony object that the call redirects from. For most switches, this DN must be in Ringing state.
<code>dest_dn</code>	Directory number of the destination telephony object that the call is redirected to.
<code>conn_id</code>	Connection identifier of the call to be redirected.
<code>reasons</code>	A pointer to a data structure that provides additional information associated with this action.
<code>extensions</code>	A pointer to an additional data structure.

Return Values

Standard (See [standard-return-values](#).)
