# Associating Virtual Queues with Stat Servers

Starting with Release 8.1.401.00, the URS `default_stat_server` option is extended to allow you to specify a separate default Stat Server for every Virtual Queue. The extension covers cases where the URS `Connections` list contains multiple Stat Servers.

> **Important**
>
> For the option description, see the `default_stat_server` section in the New or Updated Option Descriptions topic.
