Contents

- **1 8.5.101.31**
 - **1.1 Helpful Links**
 - **1.2 What's New**
 - **1.3 Resolved Issues**
 - **1.4 Upgrade Notes**
 - **1.5 Supported Languages**

What's New

This release contains the following new feature and enhancement:

- The **[security-authentication-rules].password-no-repeats** option now supports a maximum value of 30. (MFWK-21590)

Resolved Issues

This release contains the following resolved issues:

Configuration Server now properly handles the request from an application containing valid object updates along with invalid instruction to change the Person configuration object type from agent to non-agent. Now, Configuration Server applies only the valid changes in the object and distributes correct notification. Previously, Configuration Server generated incorrect object change notifications for these objects, and this resulted in applications, including Configuration Server proxies, getting outdated data for these objects. (MFWK-21541)
