 - **1.2 What's New**
 - **1.3 Resolved Issues**
 - **1.4 Upgrade Notes**

What's New

This release contains the following new features and enhancements:

- Configuration Server in Proxy Mode now supports deployment when a dedicated instance of a proxy is being used to calculate Virtual Agent Group (VAG) membership and distribute updates to certain Genesys applications that require this information. This deployment mode can be used to disable VAG calculation on the master Configuration Server to reduce the load and optimize processing time. Review the [Deployment Guide](#) for supported scenarios and applications that can be deployed behind VAG-calculating Configuration Server proxy. (MFWK-22658)

Resolved Issues

This release contains no resolved issues.

Upgrade Notes

No special procedure is required to upgrade to release 8.5.101.47.
