Resolved Issues

This release contains the following resolved issues:

Maser configuration server configured with non-zero **proxy-load-max** intermittently, may unduly delay loading of multiple CSPs that are started concurrently. The issue occurs rarely with a specific timing or order of requests to the master server from concurrently loading proxies. When this problem occurs, the processing of multiple loading proxies resumes only after one or more **proxy-load-timeout** expirations. (MFWK-24242)

Upgrade Notes

No special procedure is required to upgrade to release 8.5.101.98.
