Resolved Issues

This release contains the following resolved issues:

The **[pulse]/database_max_active_connections** option is now working properly. Previously, the default value of 8 was always used if Genesys Pulse was connected to Oracle database. (WBRT-12158)

To improve Genesys Pulse performance under high load, an excessive number of database transactions are no longer opened. (WBRT-12157)

Now users without the Pulse Manage Users privilege do not see names of widgets that belong to other users. Previously, users without the Pulse Manage Users privilege were able to see such info while saving changes in a template. (WBRT-10565)
