9.x **VP Reporting Plugin for GAX** is part of 9.x starting in 9.0.010.06.

Release Date	Release Type	Restrictions	AIX	Linux	Mac	Solaris	Windows
08/14/24	General			X			X

What's New

This release includes the following new features and enhancements:

- Starting with this release, a strict privilege enforcement has been added for accessing the RPT API endpoints. Previously, if a user doesn't have privileges to view the reports, the options to generate the report were not shown in the GAX UI, however, if they accessed the same through the API endpoint, they received the result.

    For this enforcement, a new option **enablePrivilegeCheck** is added in the **gvp-rpt** section which when set to `true` controls whether the user privilege is enforced for API calls. By default, this option is set to `false`.

    (GVP-47150)

> ### Important
>
> If the **gvp-rpt** section is not created already, you can create a section in the GAX object. The **GVP Sites Report Access** privilege is needed to identify the connected Reporting Server in the GAX object. Ensure that the user is granted with the required **gvp-rpt** specific privileges.
