Stat Server User's Guide

Statistic Configuration Options

5/4/2025

Statistic Configuration Options

In the Genesys Statistical Model, you configure the metrics that Stat Server should collect for its clients within the Stat Server application itself on the **Options** tab. This chapter describes those options. To learn about the options that you can use to configure other aspects of the Stat Server application apart from metric definitions, refer to the *Framework Stat Server Deployment Guide*.

A metric is defined by the values of configuration options, which are described in the following sections:

- TimeProfiles Section
- Filters Section
- TimeRanges Section
- Statistical Type Sections

The Genesys Statistical Model is described in the *Overview* book of the *Reporting Technical Reference* series.
