ThisDNRole	Mandatory
time	Mandatory
TransferredNetworkCallID	Optional

Event Attribute	Type
TransferredNetworkNodeID	Optional
UserData	Optional

a. This attribute is not present for events distributed by network T-Servers.

EventNetworkPrivateInfo

Description

This event is generated both in response to a TNetworkPrivateService() function call and when it is used to notify selected sets of clients of T-Server–specific information. This event indicates that one of two forms of data has been passed:

- Information supported only by certain T-Servers, and which is not covered by general feature requests.

- Notification about changes in T-Server behavior or device/call statuses.

This event can be distributed to the following clients:

- Those who made a request for the private service, TNetworkPrivateService().

- Those registered on the specified device, depending on the nature of the service.

- Those who would otherwise be ineligible (for security reasons) for receiving given events, and who thus require additional registration in order to be notified.
