# Workforce Management Web for Supervisors Help

Forecast Templates

12/17/2025

# Forecast Templates

## Tip

Starting in this release, WFM has a new interface for the Forecast module. If you have landed on this page by accident and are using the new Supervisors interface, see the "Templates" page in the *Workforce Management Supervisor Help*, which describes the new **Forecast module**.

Forecast templates help you create forecasts for sites or business units that have little or no historical data. In addition, there are other uses for templates. For example, you can create templates for service objectives, such as **Average Speed of Answer**, and **Service Level**. In those cases, forecast templates are used to apply different values for different periods of the day, instead of using a single value for the whole day.

Use WFM Web's forecast templates features to:

Select and manage forecast templates:	See <b>Forecast Templates List View</b> .
Edit template values:	See <b>Template Properties: Data Tab</b> .
View template values in a graph:	See <b>Template Properties: Graph Tab</b> .
Add or remove activities within a template:	See <b>Template Properties: Activities Tab</b> .
Create a new template:	See <b>New Forecast Template Window</b> . <div><b>Tip</b> You can copy and paste data between a grid and a spreadsheet. For example, you can copy and paste from a <b>Scenario Volumes view</b> or <b>Scenario Staffing view</b>.</div>
Create a new template from existing data:	See <b>Save as Template Window</b> .
